- 5.Niteesh Kumar Chintapalli
- 6. Patan Modin Khan

**BATCH C4** 

**GROUP 3** 

Under the Guidance of Mr. DURGA PRASAD

#### PROBLEM STATEMENT

Do Connect is a popular Q and A form in which techniques questions was asked and answered. There are 2 users on the application:

- 1.User
- 2. Admin

#### **User Stories:**

- 1. As a user I must be able to login, and also Logout and to Register intoapplication.
- 2. As a user I must be ask any question under any given topic.
- 3.As a user I should search the question on any string written in the search box.4.As a user I may be able to Answer any question that is asked.
- 5.As a user I should be able to answer more than one question at a time.6.As a user I should be flexible to chat with other users.
- 7. As a user I should be able to upload images for reference purpose.

#### **Admin Stories:**

- 1. As an Admin I am able to logout, login and register.
- 2. As an Admin I should get mail as soon as any new Question is asked or any Answers are given.
- 3. As an Admin I should be able to delete inappropriate Questions or Answer

#### **ABSTRACT**

We all previously know about Quora and Answer Bag etc.

In the same way Do Connect is a popular Q and A form in which techniques questions was asked and answered. One can be able to login, Logout and Register into the application. One can be able to ask any question under any topic. One can be able to search the question on anystring written in search box. One can be able to Answer any question asked. One can be able to answer more than one question and more than one time. One can be able to chat with other users. One can should be able to upload images to refer.

#### **ACKNOWLEDGEMENTS**

We are profoundly grateful to **Mr. DURGA PRASAD** sir for his expert guidance and encouragement throughout the project. We would like to extend our sincere thanks to our institution for providing us with this opportunity. We are highly indebted to our guide for his guidance and constant supervision as well as for providing necessary information regarding the project and also for his support in project completion which is done by:

- 1. Abdul Rehaman Shaik
- 2. Om Sai Yadlapati
- 3. Saisree Badvelu
- 4. Chitikela Sai Teja
- 5.Niteesh Kumar Chintapalli
- 6. Patan Modin Khan

CHAPTER 9: Output	:17-24
CHAPTER 10: Conclusion	:25

#### **CHAPTER -1**

#### INTRODUCTION

#### 1.1 INTRODUCTION:

We all previously know about Quora and Answer Bag etc.

In the same way Do Connect is a popular Q and A form in which techniques questions was asked and answered. One can be able to login, Logout and Register into the application. One can be able to ask any question under any topic. One can be able to search the question on anystring written in search box. One can be able to Answer any question asked. One can be able to answer more than one question and more than one time. One can be able to chat with other users. One can should be able to upload images to refer.

#### 1.2 OVERALL DESCRIPTION:

#### 1.2.1 Description:

- Any member can register and view available products.
- Only registered member can purchase multiple products regardless of quantity. There are two roles available: User and Admin.
- User can question and answer.

#### **1.2.2** Using the code:

- 1. Attach the database in your "SQL Server Management Studio Express".
- 2. To Run application using the Microsoft Visual Studio as a website.
- 3. To Locate database.

#### 1.2.3 Web Pages details:

- o Home Page
- Login Page
- o Sign Up Page

# **SYSTEM SPECIFICATIONS**

SOFTWARE REQUIREMENTS:

2.1

	Technologies:			
		0	Angular Java	
		0	Spring Boot	
	Languages:			
		0	Type Script	
		0	Java	
		0	SQL Queries	
	IDE:			
		0	Eclipse	
		0	Vs code	
		0	My SQL	
2.2	HARDWARE REQUIREMENTS			
2.3	3 :Operating System:			
		0	Windows 7/8/10/11	
		0	Linux distros	
		0	MacOS X or later.	
	Processor:			
		0	Intel or AMD dual core x86 processor.	
	Ram:			
		0	2 GB or above.	
	Hard disk:			
		$\circ$	500 MB of free disk space or more	

#### ANGULAR ARCHITECTURE

Angular may be a platform or framework to build client-based applications in HTML and TypeScript. it's written in TypeScript. It implements core and optional functionality as a group of TypeScript libraries that are imported into applications.

There are main eight blocks of Angular:

- Module
- Component
- Metadata
- Template
- Data Binding
- Service
- Directive
- Dependency Injection

#### Module:

Angular apps are modular and Angular has its own way of modularity system referred to as Angular modules or Ng-Modules. Every Angular app will contains an Angular module class, and the root module, conventionally named as App-Module.

Ng-Module is function which take a single metadata object whose properties describes the module. The most important properties of Ng-Module are as follows:

- declarations the view classes that belong to the present module. Angular has 3 different typed view classes namely: components, directives, and therefore the pipes.
- exports the subset of declarations that ought to be visible and usable in the componenttemplates of other modules..

- imports these are the other modules whose exported classes are much needed by the component templates declared in *this* module.
- providers these are creators of the <u>services</u>.

#### Metadata:

Metadata is employed decorate a class so that it can configure the expected behavior of the class. Annotations are part for metadata. Annotation is an array and also an example having both the @Component @Routes decorator.

#### Service:

Service is a function which satisfy our application needs.

#### Examples include:

- logging service
- data service
- message bus
- tax calculator
- application configuration

#### Directive:

Directives are classes that add new behavior or modify the prevailing behavior to the elements in the template. Basically directives are there to manipulate the DOM, for exampleadding/removing the element from DOM or changing the appearance of the DOM elements.

#### Dependency Injection:

Dependency injection, or DI, a design pattern in which a class requestsdependencies from external sources rather than creating them.

# CHAPTER 4 SPRINGBOOT

**ARCHITECTURE** 

FIGURE 1: SPRING BOOT ARCHITECTURE

The spring boot contains following four layers:

- Presentation Layer
- Business Layer
- Persistence Layer
- Database Layer

FIGURE 2: LAYERS

#### **Presentation Layer:**

It is the uppermost layer of the spring boot architecture. It consists of the many Views. i.e., the front-end a part of application. It take-care on HTTP requests and also performs the authentication.

#### **Business Layer:**

It contains business logic. It's responsible for the validation part and also for authorization.

#### Persistence Layer:

It translates business objects to database rows.

#### Database:

The database layer contains all the databases like MySql, MongoDB, etc.. It'is responsible for performing the CRUD operations.

#### MICROSERVICE ARCHITECTURE

# MONOLITHIC

# MICROSERVICES

FIGURE3:MICROSERVICE ARCHITECTURE

- Typically, micro services are used to speed up application development.
- Micro services architectures built using Java are common, especially Spring Boot ones.

#### **DATABASE ARCHITECTURE**

FIGURE 4: ARCHITECTURE OF DATABASE SYSTEM

# CHAPTER 7 TOTAL PROJECT OVERVIEW

FIGURE 5: PROJECT OVERVIEW

Full-stack-web-development entails the creation of both the frontend (or front end) and backend (orbackend) of an internet site or application. front and back end developers are usually necessary for every web development project; however, a full stack developer performs both.

#### 7.1 FUNCTIONALITY OF USER

- As user I should be logged-in, Logout and Register.
- As a user I should be ready to ask any questions on any topic.
- As a user I should be ready to search the question written in the given search box.
- As a user I should Answer any question.
- As a user I should be ready to answer more than one questions at a time.
- As a user I should be ready to chat with the others.
- As a user I should be ready to upload images to refer

#### 7.1 FUNCTIONALITY OF ADMIN

- As an Admin I should be able to login, Logout and Register into the application.
- As an Admin I should be able to get mail as soon as any new Question is asked or any Answers
- As an Admin I should be able to approve the question and Answer. Any
  Question or Answer will
  be visible onthe platform only if it is approved.
- As an Admin I should be able to delete inappropriate Questions

FIGURE 15: Backend (spring boot)

# **CONCLUSION**

We conclude that we have created a Do connect application successfully with all the requirements mentioned in the given problem statement and we have successfully deployed our project in the Angular and spring boot.
